Class: com.example.classtopdf.Person

Fields:

- firstName: java.lang.String

- lastName: java.lang.String

- age: int

- a: com.example.classtopdf.A

Class: com.example.classtopdf.A

Fields:

- name: java.lang.String

- age: int

Methods:

- default void displayInfo()

- phone: [Lcom.example.classtopdf.Phone;

Class: com.example.classtopdf.Phone

Fields:

- number: java.lang.String

- type: java.lang.String

Methods:

- public String getType()

- public String getNumber()

- public void setType()

- public void setNumber()

- address: com.example.classtopdf.Address

Class: com.example.classtopdf.Address

Fields:

- city: java.lang.String

- street: java.lang.String

- houseNumber: int

Methods:

- public void setHouseNumber()

- public int getHouseNumber()

- public String getStreet()

- public void setStreet()

- public String getCity()

- public void setCity()

- phones: java.util.List

(This is a collection, individual elements not shown.)

Methods:

- public Address getAddress()

- public void setAge()

- public List getPhones()

- public void setAddress()

- public void setPhones()

- public void setLastName()

- public String getFirstName()

- public String getLastName()

- public void setFirstName()

- public int getAge()
